theoretical framework. The first approach uses a model of game theory to analyze strategic interactions between firms. The second approach uses a model of game theory to analyze strategic interactions between firms and consumers.

卷之三

- **Indirect approach**
 - adding (new) elements providing original system rules. It maintains current logic while adding new logic
 - adding (new) elements providing all standard logic (long awaited original rules after new)
 - adds additional logic along standard original rules giving opportunity to propagate requirements. Using PSL again for additional requirement.
 - **Partial approach**
 - initial problem domain :
 - giving requirements with respect to standard logic elements such as the Standard problem domain. It requires using partial domain.
 - Separating requirements with respect to Standard problem domain. It requires using partial domain.
 - initial problem specific domain. Separating with respect to domain.
 - **new**
 - introduce new problem domain in new language with respect to original domain

- and other things passing through him, and you have had a hard time.

卷之三

Multiple dimensions (e.g., age, culture, weight, and gender) have been shown to significantly affect the perception of pain. Age, gender, and ethnicity are three key variables that have been found to influence pain perception.

卷之三

Whichever approach they take, the results will be the same: a better understanding of the dynamics of the system.

Figure 1. Comparison of the mean (SD) of the total and individual components of the HbA_1c test results between the two methods.
